

Al Fattan Sky Towers

Dubai, United Arab Emirates

Project Overview and Details

Dubai lives in the digital age and the ambition of Al Fattan Sky Towers is to pay homage to that. The 20-storey twin residential towers are built for a world where modernity has come to mean two things: luxury and convenience. For its enviable location, cutting edge facade and the fantastic 360° views it commands, the city has distinguished Al Fattan Sky Towers as its newest iconic landmark.

Al Fattan Sky Towers focuses on the enjoyment of modern luxury and a lifestyle of convenience. Podium Level 3 has all the trimmings of a posh resort with landscaped gardens, premium health club, gymnasium, day care cloisters, and full-size outdoor pool.

The MEP contractor: GECO.

The Consultant: AE-7.

Solution

Al Fattan Sky Towers, being one of the fast track projects, needed a plug and play solution for all their fan coil units.

Frese provided 2,479 Frese MODULA Pro, an entire valve package completely manufactured by Frese, to cater to the project needs. The product saved a lot of time for the installers and helped the contractor to deliver the project to the best possible handover time.
