- Flow rate: Up to 2448 l/h
- Material: DZR brass
- Static pressure: PN25
- For cooling and heating
applications

Project Overview and Details

Located thirty kilometers from Warsaw, Warszawianka Centrum Kongresowe Hotel Wellness & SPA is a modern hotel and conference complex with attractive spaces and facilities for relaxation. An advantageous location on the road from Warsaw to Augustów gives an opportunity to fast communication with the financial and business center in the capital city. The hotel is located on the verge of Mazovian wilderness, among picturesque fields. Groups as well as individual guests can relax in comfortable, quiet surrounding at Zegrzyński lake.

The hotel was awarded with the Best Polish Prestige Hotel Price, Family Friendly Hotel and the Best Conference Spa. Exquisite cuisine in three restaurants as well as comfortable and spacious rooms provide a high level of comfort and service. Warszawianka fulfills a lot of high standard requirements. That is why UEFA decided to choose it among other hotels as a residential base for Euro 2012. The Greek federation has decided to have their accommodation center in Jachranka.

Task

Unproblematic, noiseless and maintenance-free operation of the heating/cooling system in all parts of the complex: the hotel, congress center, wellness and spa.

Solution

Frese automatic balancing and control valves were selected for the third stage of rebuilding the conference center as well as the hotel. In order to ensure hydraulic balance and desired temperature in the system 700 Frese EVA DN15 with LP cartridges were installed.
